MYPLAY

COLDPLAY TRIBUTE

PRESS KIT – Official Presentation

MyPlay – Coldplay Tribute was born from an ambitious idea: to recreate the exhilarating atmosphere and spectacle of a Coldplay concert, combining musical precision, meticulous stage production and genuine emotional impact. The project is inspired by Coldplay's unique approach to live shows: an explosion of colour, emotion, energy and connection with the audience.

The band members bring extensive experience in both tribute acts and original music. This solid musical background, together with a longstanding friendship, allows MyPlay to deliver an engaging, authentic performance built on a strong connection between musicians.

Led by the powerful voice of **Gabriele Corrente**, MyPlay features **Francesco Nichele** on guitar and programming, **Enrico Cipolla** on bass - who also oversees the project's digital strategy - and **Massimo Andreetta** on drums. The creative and technical team includes **Andrea Pedron** of Officine Eventi as sound engineer, **Marco Scolaro** as lighting engineer, photographer **Beppe Acacia** and **Damian Laing**, who is responsible for the live visuals. **Cristian Fior**, creator of the official videos, completes the multimedia team. Together, they shape every detail on stage and behind the scenes.

Running for over two hours, MyPlay's live show takes audiences on a journey through Coldplay's career, from celebrated hits to iconic moments. Faithful arrangements meet striking stage production: streamers, confetti, Sparkular effects, giant balloons and heart-effect glasses, alongside fully synchronized video, lighting and LED wristbands.

The band is supported by a professional technical crew - sound engineer, lighting designer, photographer and videographer - with whom it has worked for many years. This close-knit team is one of the project's strengths, helping ensure consistent quality, reliability and attention to detail throughout the production.

With a growing calendar of live dates, MyPlay continues to strengthen its presence across northern Italy, standing out for its technical precision, cohesive production and live impact.
